The methods and compositions of the present invention are useful for the diagnosis and/c treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated arginine-rich protein-like polynucleotides and useful for diagnosing and/or treating conditions associated activity of the arginine-rich polypeptides, such as cancer activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-MAR-2001; 2001US-00799451

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ą,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
CC Sequences AAF59590-AAF59643 represent cDNAs encoding 54 human cell cycle CC and proliferation proteins (CCYPR), AAB60453-AAB60506. CCYPR and agonists CC of CCYPR are used to treat diseases or conditions associated with cCC decreased expression of functional CCYPR, while CCYPR antagonists are CC used to treat diseases or conditions associated with overexpression of functional CCYPR. Monoclonal or polyclonal antibodies to CCYPR may be used in enzyme-linked immunosorbent assays (ELISA) or radioimmunosays to CC detect CCYPR. CCYPR itself may be used to detect compounds e.g., CC antibodies, oligonuclectides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to identify compounds that compounds that modulate the activity of CCYPR. CCYPR nucleotides can be used to generate thrangenic animal models of human disease, and can be used in gene compounds that the compounds of CCYPR. CCYPR nucleotides can be used to generate thrangenic animal models of human disease, and can be used in gene compounds that compounds that compounds that the protein compounds that the associated with CCYPR. Diseases which can be disorder animal models of the proteins include anaemia, epilepsy, arterioscis, agonists or antagonists compounds cell concers. Specific examples of these construed using disorders include anaemia, epilepsy, arteriosclerosis, asthma, cancer, confections caused by bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                    Human cell cycle and proliferation proteins and polynucleotides are used to treat, diagnose and prevent immune, developmental and cell signaling disorders and cell proliferative disorders including cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cell cycle and proliferation protein; CCYPR; human; agonist; antag gene therapy; detection; gene therapy; transgenic animal disease m immune disorder; developmental disorder; cell signalling disorder; cell proliferative disorder; cancer; tumour; anaemia; epilepsy; arteriosclerosis; asthma; allergy; diabetes mellitus; menstrual cycle disorder; bacterial infection; ss.

CC sequences (optionally with conservative amino acid substitutions), an CC isolated antibody that binds specifically to a peptide cited above, CC methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing CC acustomer desiring to measure gene expression, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe coited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying ctissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. CC in addition, the probes are used in identifying and characterising cc alternative splicing events, in detecting and characterising gross calterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, cor in expressing the ORF-encoded peptide. The present sequence is a human csingle exon morbe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained contained across the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a nucleic acid probe for measuring human gene continues of the 27,400 fully defined nucleotide content of the specification, or their complements or fragments, and concoling at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that the specification of the specification of the probe is a single exon probe that the specification of the probe is a single exon probe that the specification of the probe is a single exon probe that the specification of the probes is a single exon probe that the specification of the probes is a single exon probe that the specific acid probes for measuring human concoling the single exon nucleic acid probes for measuring human concoling at least the plurality of single exon nucleic acid probes is separately and addressably isolatable or amplifiable from the plurality, a single exon microarray for measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon contiguous amino acids of any of the above mentioned amino acid of contiguous amino acids of any of the above mentioned amino acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human genome-derived single exon nucleic acid probes useful gene expression analysis, for identifying or characterizing altesplicing events, for assessing genomic alterations or as tools is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 15; SEQ ID NO 9211; 80pp; English

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic NAS. 5' ESTs are also used in
Drosophila melanogaster expressed polynucleotide SEQ ID NO 16031
                                                                                                                                                                                                                                                                                                                 Sequence 340 BP;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid genes from Drosophila and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 829 BP; 229 A; 208 C; 210 G; 182 T; 0 U;

                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polynucleotide comprising any one of C3 88043 cDNA sequences, appearing as ACHI-2789-ACH59831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                          The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. ESTs are derived from mRNAs with intact 5' ends and can therefore be us to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

                                                                                                                                                                                                                             expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic delis. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                     AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis ar treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding human immune/hematopoietic useful for preventing, diagnosing and/or treating

                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventior useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIG176-ABIG3051), expressed DNA sequences (ABIG1840-ABIG175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABL07182 standard; cDNA; 4406

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAQ00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                   and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-FEB-2000; 2000US-00515126.

nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides, or (b) a combin of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

combination

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary to the

Primer sets for synthesizing polynucleotides, length cDNAs defined in the specification, and diagnosis of the abnormality of the proteins of the abnormality of the proteins of the proteins of the abnormality of the proteins of

and

, particularly the 5602 full-nd for the detection and/or encoded by the full-length

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods AHH33166 to AHH3628 and AHH3331 to AHH89742 represent human cDNA sequences; AHB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                              sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human aclid sequences; ABB2446 to AAB95893 represent human acid sequences; and AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dl primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 8;

A protein encoded by a gene of the invention has analgesic activity. A polynucleotide of the invention may have a use in gene therapy. The gene sequence is useful for preparing a composition for diagnosing or treating pain. The present sequence represents a gene of the invention.

                                                                                                                                   ş
                                                                                                                                                                                                                                                                                     CC gene expression (comprising a plurality of single exon nucleic acid gene expression (comprising a plurality of single exon nucleic acid comprobes cited above, where each of the plurality of probes is separately cand addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of commicroarray for measuring human gene expression, a method of comprising human gene expression, a method of comprobe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid substitutions), an constiguous amino acid substitutions and comprobe of selling and/or licensing single exon probes or microarrays to contiguous antibody that binds specifically to a peptide cited above, contains and comprobes or microarrays to a customer desiring to measure gene expression, a method of providing thuman gene expression data by subscription, and a computer-readable contains a database having a plurality of records cexpression analysis. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. Constructing genome-derived single exon microarrays. Constructions in the genomic locus that includes that exon, in assessing confidence in the probes are used in identifying and characterising gross alterations in the genomic locus that includes that exon, in assessing the original exon probe of the invention. Note: The sequence is a human confidence of the invention, but was obtained confidence of the invention of the printed specification, but was obtained confidence in electronic format directly from USPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or ragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                              Sequence 543 BP; 137 A; 128 C; 119 G; 159 T; 0 U; 0 Other,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                              candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death. The products of the cinvention have cytostatic, fungicide; immunosuppressive, virucide and vasotropic activity and can be used in vaccines or for gene therapy. The isolated nucleic acids, polypeptides, pharmaceutical compositions, antisense molecules and antibodies are useful as medicaments or in preparing a medicament for treating, preventing and/or alleviating preparing a medicament for treating, preventing and/or alleviating compositions, or in associated with yeast or fungi or proliferative disorders, such as cancer, or for preventing apoptosis in certain diseases. The compounds or polypeptides, or the genetically modified organism are useful for preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease, ischaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polynucleotide associated with the Bax gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 36; Fig 2; 344pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid representing a synthetic BAX-gene, useful as medicament for treating, preventing and/or alleviating yeast or fungal infections or proliferative disorders, or for preventing apoptosis in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-DEC-2000; 2000EP-00870318
